

RoHS Directive 2011/65/EU COMPLIANCE

The new RoHS Directive 2011/65/EU ("RoHS 2") came into force on 21 July 2011 and became law 2 January 2013.

To the best of our knowledge our products do not contain any of the 6 restricted substances in concentrations exceeding the Maximum Control Value (MCV).

Pickering Interfaces shall reserve the right to exercise exemptions in accordance to the directive; for example: The re-use and upgrading of EEE placed on the market before 1 July 2006

- The re-use and upgrading of Monitoring & Control instruments and Medical Devices placed on the market before 22 July 2014
- The re-use of spare parts recovered from EEE placed on the market before 1 July 2006 and used in equipment placed on the market before 1 July 2016
- Our products may use surface mount devices that contain high melting temperature type solders (i.e. alloys containing 85% by weight or more lead) in order to allow them to withstand lead-free reflow temperatures. See Annex III #7(a)
- Our products may use high frequency RF switches and relays that contain up to 20mg of mercury per switch or relay in order to achieve very high accuracy measurements. See Annex IV #16.

Note

The scope of the RoHS does not include all EEE; for example equipment specifically designed for Research & Development, Military and Space.

Disclaimer:

The statement made herein is based on Pickering's understanding of the RoHS directive and is based on the information provided by suppliers. As such; all statements are contingent upon the accuracy of this information.
