

Custom Cabling with the **Cable Design Tool** from Pickering Interfaces

At Pickering, we recognize the significance of delivering high-performance and reliable solutions that facilitate seamless interconnections between Test Systems and Devices Under Test. Our Connect Division specializes in custom cable assembly and connectivity solutions that support our modular switching, simulation, and instrumentation products.

With advanced resources such as our free online **Cable Design Tool**, designing and manufacturing fully customized cabling solutions has never been easier. This tool allows you to create solutions tailored precisely and efficiently to your specific needs.

Start using the tool: pickeringtest.com/cdt

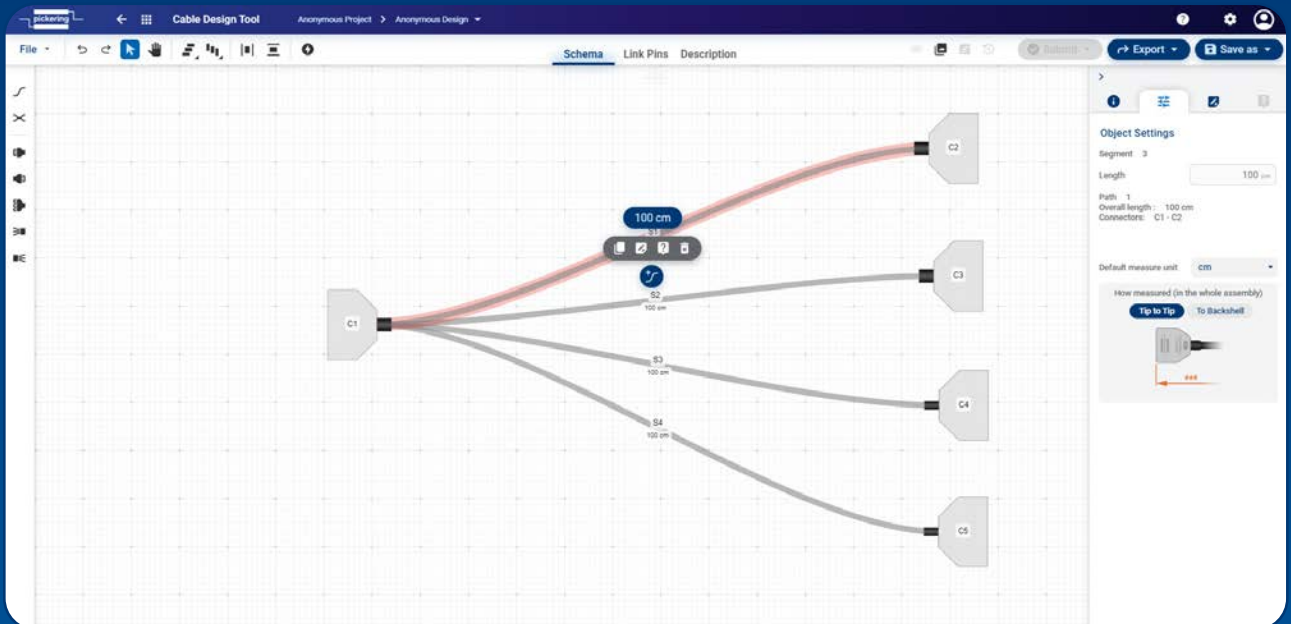

Five Steps to Designing a Cable Assembly using the Cable Design Tool

Go to pickeringtest.com/cdt to start using the tool.

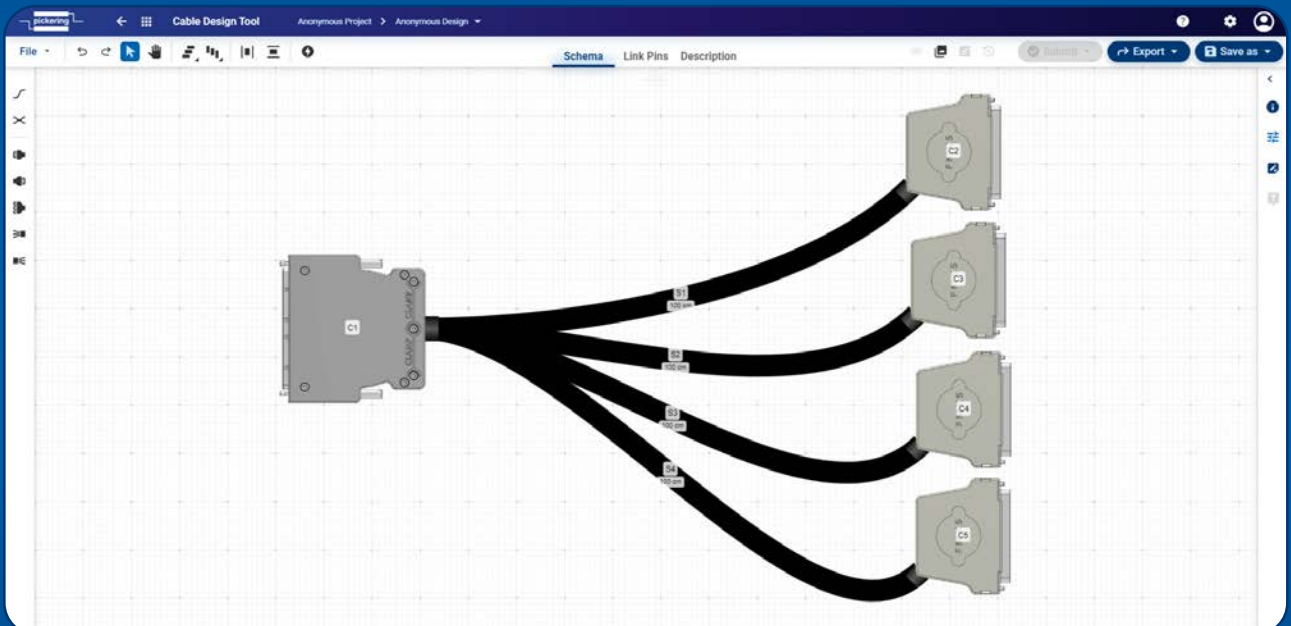

Step 1

Determine the basic layout of the cable assembly by adding generic connectors and the paths between them. Alternatively, select a standard cable assembly from the integral library to use as a template.

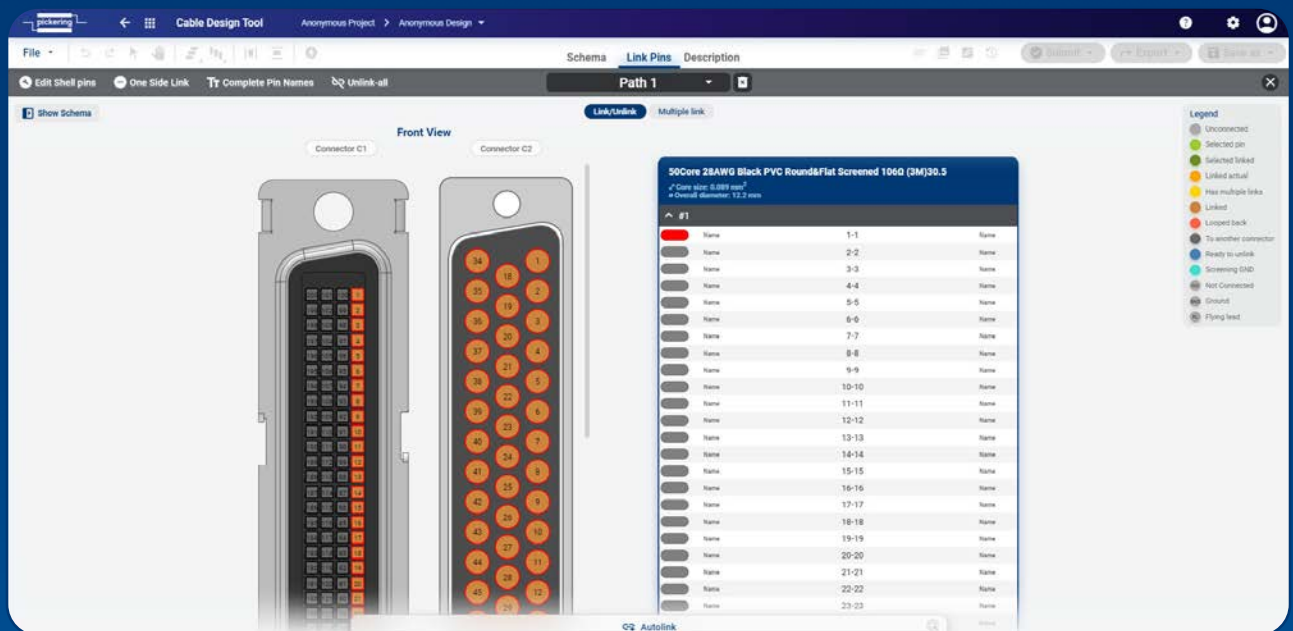

Step 2

The required connectors and interconnecting wire types can then be selected from the comprehensive libraries supplied.

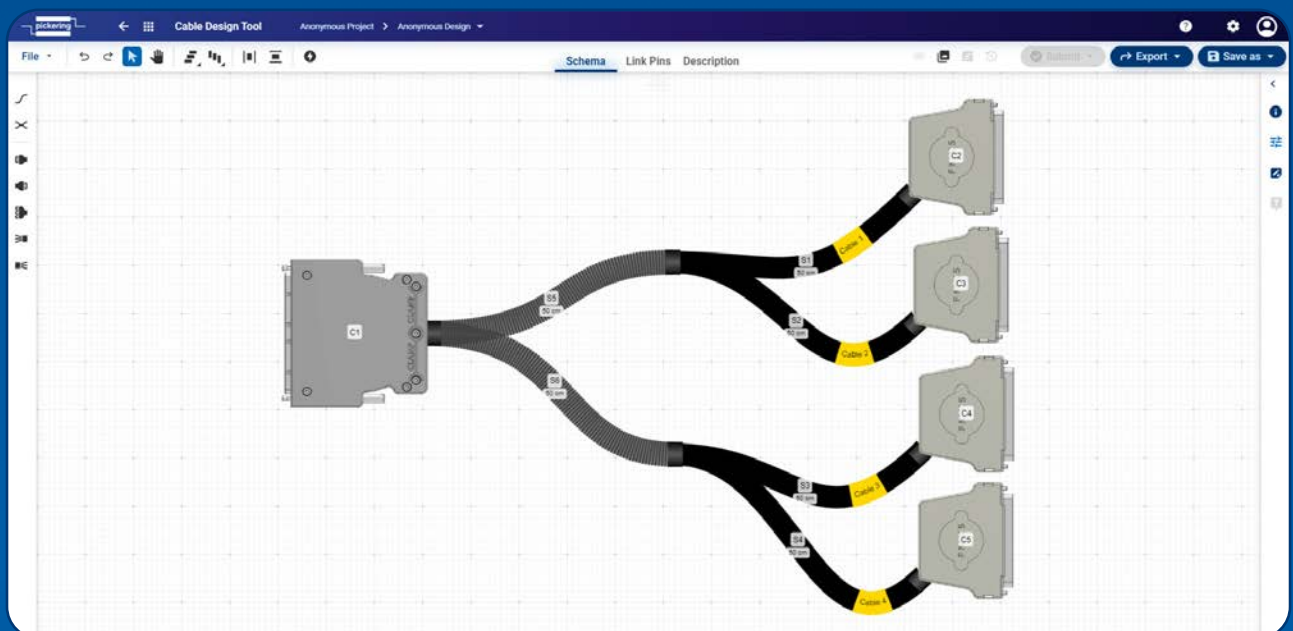

Step 3

The connector pins at the end of each path are then linked. The Autolink feature can be used to automatically link concurrent pins.

Step 4

Sleeving, Screening, Path Bundling and Labels can then be added to the cable assembly as required.

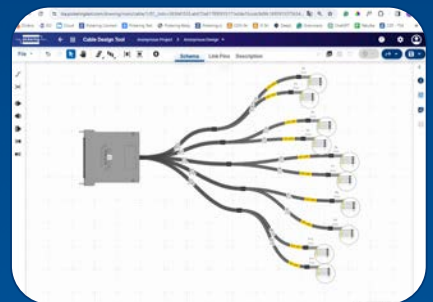

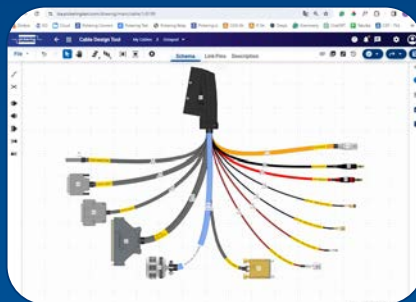

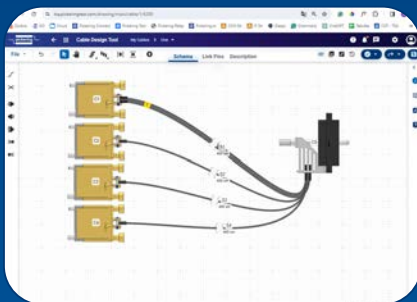

Step 5

Simply submit the completed cable assembly design to Pickering and we will provide pricing.

Custom Cabling with the **Cable Design Tool**

- Fully supported on modern browsers and tablet operating systems.
- Built-in tutorials and videos allow you to get quickly up to speed.
- Store cable assemblies in the Cloud and develop over time.
- Each cable design has a downloadable PDF documentation file detailing all specifications
- Start designing your custom cabling, go to: **pickeringconnect.com/cdt**
